EDUCATION

Punjab Engineering College

Bachelor of Technology in Computer Science & Engineering

Chandigarh, India

Aug. 2023 – Sep. 2027

TECHNICAL SKILLS

GTM & Automation: n8n, VAPI, Apollo.io, Clay, Lemlist, Phantombuster, HubSpot, MCP Server, Meta API

AI & LLMs: Claude, OpenAI GPT-4o, Google Gemini, LangChain, LangGraph, RAG Systems, AI Agents, Prompt Engineering, Structured Outputs

Languages & Databases: Python, JavaScript, TypeScript, PostgreSQL, Neo4j, Supabase, Firebase, MySQL

EXPERIENCE

Freelance AI Automation & GTM Engineer

Self-Employed

Nov. 2025 – Present

- Designed and shipped end-to-end outbound engines for 4+ clients, covering lead sourcing, AI-driven qualification, and CRM sync via n8n pipelines processing 300+ leads/month with zero human intervention.
- Built LLM-powered lead scoring and classification workflows using structured output prompting to rank inbound signals and route qualified prospects into the appropriate sequences automatically.
- Developed Telegram bots backed by LLM summarization to surface real-time campaign insights, enabling async observability and reducing client monitoring overhead across active outbound workflows.
- Translated vague client GTM requirements into reliable production systems integrating multiple LLM providers, CRMs, and external APIs, debugging edge cases across real deployment environments.

AI/ML Engineering Intern

Fradle Corporation

- Built LangChain agent workflows using GPT-4o for intelligent query routing and contextual response generation, with semantic search over structured data via PostgreSQL pgvector.
- Designed RESTful APIs serving AI model inferences to the frontend and integrated Google Gemini into a production help-request module with structured, reliable response formatting.

PROJECTS

B2B Outreach Agent | *Claude, Apollo.io, Clay, Lemlist, MCP Server*

- Orchestrated a fully autonomous B2B outbound pipeline using Claude to coordinate prospecting, enrichment, and campaign execution, cutting deployment from weeks of manual effort to under 24 hours.
- Implemented waterfall enrichment using Apollo.io for lead discovery and Clay for deep profile enrichment, then dynamically generated LLM-driven 5-touchpoint personalized sequences spanning a 16-day outreach window.
- Integrated enriched contact payloads and generated sequences into Lemlist via MCP connectors, enabling fully hands-off campaign scheduling and autonomous multi-channel execution.

LinkedIn Outreach Automation | *n8n, Phantombuster, HubSpot, Gemini, Slack*

- Built a two-workflow n8n automation that discovers LinkedIn prospects via Phantombuster, generates AI-personalized connection messages using Gemini, and launches campaigns autonomously, eliminating manual outreach entirely.
- Engineered a lead sync pipeline that filters accepted connection requests, deduplicates against HubSpot CRM, and creates enriched contact records automatically, keeping the pipeline clean without human intervention.
- Wired real-time Slack notifications on connection acceptance events, enabling instant follow-up triggers and building a consistent flow of warm conversations at scale.

Productivity Voice Agent | *VAPI, N8N, MCP Server*

- Built an autonomous voice agent using VAPI and n8n MCP that routes natural language commands to calendar, to-do, and external tools through an orchestration layer, reducing manual task entry by 70%.
- Achieved sub-2-second voice-to-action latency by optimizing VAPI webhook routing and n8n execution paths, sustaining 94% task completion across 100+ weekly delegations with zero-code extensibility for new tool connections.
